Office of Research on Women's Health

Melissa Simon, M.D., M.P.H. (she/her)

Vice Chair for Research, Department of Obstetrics and Gynecology and George H. Gardner, MD, Professor of Clinical Gynecology, Feinberg School of Medicine, Northwestern University

Founding Director, Center for Health Equity Transformation and the Chicago Cancer Health Equity Collaborative, Feinberg School of Medicine, Northwestern University

Dr. Simon's primary research interests are aimed at promoting health equity and eliminating health disparities among low-income, medically underserved women across the lifespan.

Integrating health services research with social epidemiologic models, Dr. Simon's research focuses on interventions (such as patient navigation and community health outreach) that aim to reduce and eliminate such disparities. Dr. Simon prefers to leverage culture and community to achieve these goals and thereby integrates a community-based participatory research framework into her work. She also has a strong portfolio of workforce development programs, including the world's first free massive open online course dedicated to health care pipeline development on the Coursera platform. Dr. Simon serves as a member of the U.S. Preventive Services Task Force and the National Academy of Medicine's Roundtable on the Promotion of Health Equity.
